Do you trust your Politicians?

Did you know an ingredient used since 1929 was never tested by any gov agency.

A Congressional hearing was finally held in 2004. pic.twitter.com/d4CNskOWHA

— TXgrlWatching\U0001f4bb\u2694\U0001f6e1 (@VeritasTXgem) February 5, 2021

Limited short-term data

NO long-term data avail. incl. potential impacts on fertility.

“The discovery & research phase is normally 2-to-5yrs, according to the Wellcome Trust. In total, a ■ can take more than 10yrs to fully develop”

<https://t.co/NuLddlgABc>

mRNA■ completely novel tech- essentially experimental, w/ possibility unanticipated/unpredictable long-term/late onset effects...post viral syndromes.

“epidemiological, clinical & experimental evidence ME/CFS constitutes major type of adverse effect...”

<https://t.co/UZyZvozQX8>

CV-19■ development accelerated. safety testing normally c.10 years. Current CV-19 vaccines trialled for a few months w/little/no animal testing.

PHASE 3 trials won't complete for 2yrs

<https://t.co/AesV7bqINT>

<https://t.co/zTJpVcZzmP>

mRNA■ completely novel tech- essentially experimental, w/ the possibility of unanticipated/unpredictable long-term/late onset health effects.

Risk of Antibody Dependent Enhancement

causing more severe Covid-19 illness on exposure to virus post-vaccination

CV-19 vaccines may sensitize recipients to more severe disease

<https://t.co/pJ0xeEoXfS>

Potential cross-reactivity of vaccine-induced antibodies to virus spike protein, with the placental protein syncytin-1, could cause infertility

<https://t.co/6B8Y2PKMrU>

The CDC identified reports of anaphylaxis following Pfizer-BioNtech vaccine meeting Brighton Collaboration criteria for anaphylaxis

CDC updated advice on equipment necessary at all vaccination sites to deal with anaphylaxis

Anaphylaxis reports:

<https://t.co/Pe9ptL6UhP>

It is known that vaccines can switch on allergy & autoimmunity

May be contraindicated w/ pre-existing
autoimmune conditions or CFS/ME, or prev■ injury/reactions

MHRA 09 Dec 2020: Any person history of anaphylaxis to ■, medicine, or food should not receive Pfizer/BioNtech■

A 2nd dose should not be given to
anyone who has experienced anaphylaxis.

Any patient w/ a history or strong family history of allergies or autoimmune conditions may choose to refuse a CV-19■.

Doctors working with CFS/ME patients already advise them to avoid
vaccination as this may trigger a relapse.

<https://t.co/iJ75jVkJt>

There have been reports of some serious side-effects including 2 cases of transverse myelitis & neurological conditions in
the Astra Zeneca trial.

Astra Zeneca Transverse Myelitis report

<https://t.co/uunogDLxVI>

<https://t.co/TAYnkttdYS>

Risks of harm and potential benefits that
the patient would consider significant for
any reason. These will be revealed during
your discussion with the patient about
what matters to them.

Patient's individual risk from Covid-19 MUST be discussed – IFR <0.05% for <70yrs to weigh up against risk from ■

Covid-19 IFR estimate by age (Table 2):

<https://t.co/yvY44SupoV>

Patient expectation of vaccine benefit i.e.
reducing risk of severe illness, hospitalisation and preventing infection with and transmission of SARS-Cov-2

Make patient aware that current trials are not designed to show if CV-19■ will reduce their risk of hospitalisation or death or
will prevent infection and transmission of virus as may affect risk v benefit profile

<https://t.co/IFGDIRQTB2>

Patients MUST be made aware of the full list of vaccine ingredients

Ethical/religious considerations e.g. animal products -vegetarianism/veganism, WI-38 human diploid cells (aborted fetus

source) - pro-life/religious belief

You have the right to see full list of adverse reactions in insert.

Ex: Common side-effects include chills, fever, myalgia, fatigue, arthralgia, headache, and pain at the injection site.

A reaction to the 1st dose may increase risk of a major reaction to a 2nd dose.

Before a 2nd dose, the patient must be asked about their reaction to the 1st dose.

Moderna vaccine -100% of high-dose participants report systemic side effects after second dose, some severe.
