**Sri Venkateswara Swamy Temple bells, Tirumala, Tirupathi.**

**■ THE SCIENCE BEHIND TEMPLE BELLS ■**

**Most of the old temples ■ have large bells ■ at the entrance of the temple ■ and you need to ring ■ them before you enter temple.**

Temple bells■ have a scientific phenomena; it is not just some ordinary metal.

It is made of various metals including
■cadmium,
■lead,
■copper,
■zinc,
■nickel,
■chromium
and
■manganese.

The proportion in which each one of them is mixed, is the real science behind a bell. ■

Each of these bells ■ is made to produce such a distinct sound ■ ■that it can create unity of your ■left and right ■ brain.

The moment you ring that bell, ■ bell produces a sharp but lasting sound ■which lasts for minimum of seven 7■ seconds in echo ■ mode good enough to touch your seven healing centres ■ or chakras in your body.

The moment the bell ■ is sounded, your brain is emptied of all thoughts.

Invariably you will enter the state where you are very receptive. ■

This Trans state is the one with awareness.

Your mind is so pre-occupied ■ that the only way to awaken you is with a Shock! ■■

■ Bell works as Anti-dote to your mind.

Before you enter temple – to awake you and prepare you for taste of awareness is the real reason behind the tradition of ringing the temple bells. ■■■
