The image displays two horizontal series of black squares. The top series contains 10 squares of uniform width. The bottom series contains 10 squares of varying widths, starting with the widest square on the far left and decreasing in size towards the right.

A horizontal row of twelve black squares of equal size, arranged in a single line.

Figure 1. A schematic diagram of the experimental setup. The light source (laser) emits a beam of light that passes through a lens and a polarizer. The beam then passes through a series of optical components, including a beam splitter, lenses, and mirrors, before being focused onto a sample stage. The sample stage holds a sample of material, which is illuminated by the laser beam. The reflected light from the sample is collected by a lens and directed to a photodetector. The photodetector measures the intensity of the reflected light, which is used to calculate the reflectance of the sample. The entire setup is contained within a vacuum chamber.

A horizontal row of ten solid black squares arranged side-by-side.

CSR () ? ...

A horizontal row of twelve solid black squares of equal size, followed by a small ellipsis consisting of three dots (...).

A horizontal row of ten solid black squares arranged side-by-side.
