1/ We have published an amendment to Proposal 1623, incorporating the community's feedback since its publication 2 days ago. Please see below for details

2/ There are 3 revisions included in this amendment ■:

3/ 1. Increasing genesis liquidity:

For pre-attack \$aUST holders, post-attack \$LUNA holders, & post-attack \$UST holders, the initial liquidity parameters have been modified from 15% to 30% to increase token supply at launch & mitigate future inflationary pressures.

4/ 2. Introducing a new liquidity profile for pre-attack \$LUNA holders:

Wallets with < 10k \$LUNA will have the same genesis liquidity as the above groups (i.e., 30% unlocked at launch), & have the remaining 70% vested over 2 years with a 6 month cliff.

5/ Introducing this new liquidity profile ensures that small \$LUNA holders have similar initial liquidity profiles. This would cover 99.81% of \$LUNA wallets while only representing 6.45% of total \$LUNA at the Pre-attack snapshot.

6/ 3. Decreasing distribution to post-attack \$UST holders:

The allocation for post-attack \$UST holders has decreased from 20% to 15% to ensure the de-peg related allocation is on par with the original stakeholder (pre-attack \$LUNA) allocation.

7/ The residual 5% change from decreasing the distribution to post-attack \$UST holders will be allocated to the community pool.

8/ Voting on Prop 1623 ends in 5 days.

Please review these amendments and cast your votes if you haven't yet voted. ■■

If you've already voted & disagree with these revisions, please vote "No". ■
