1/11 Successfully launch just 2 weeks after the vicious Terra 1 death spiral ■

Immediately achieve the highest valuation in all of Cosmos ■

What's next for [@Terra_Money 2.0](#)?

Let's discuss the likely Terra 2 roadmap for the next 3 months. ■■

2/11 Most protocols require a DEX with sufficient liquidity, so that comes first.

At this very moment, 4 DEXes are racing to be the first to launch on Terra 2.

[@PhoenixFinan](#), [@Astroport_fi](#), [@Terraswap_io](#), and possibly the Prism Swap DEX by [@Prism_Protocol](#).

3/11 Keep an eye on those Twitter accounts to see who wins the race.

Once we have a DEX, a stablecoin will be crucial. Sounds like USDC via [@Axelarcore](#) bridge is a possibility.

According to high-level convos, native USDT is also a possibility. ■

4/11 (For those who are loath to use a fiat-backed stable, keep in mind that a new decentralized stable could be easily developed in the future.

UST taught us many lessons, and we can improve.

Innovative small-scale algo-stable or collateralized stable are possibilities.)

5/11 Simultaneous with the launch of DEXes will be liquid staking providers.

[@StaderLabs](#), [@Prism_Protocol](#), and the new [@Eris_Protocol](#) are all vying to give you a liquid staking derivative of LUNA.

6/11 As DEXes are launching and accumulating liquidity, we will probably see NFT activity emerge.

[@RandomEarth_io](#), [@Knowhere_art](#), and the innovative new [@Soil_Protocol](#) to support Terra 2.

I sense a strong potential for Terra 1 commemorative NFTs.

7/11 Once DEXes are in place with stables and liquidity - then the real fun begins.

Terra 2 becomes a Cosmos DeFi Hub, with a powerful suite of DeFi tools.

[@Nebula_Protocol](#), [@Sig_Finance](#), [@Prism_Protocol](#), [@Anchor_protocol](#), [@EdgeProtocol](#), and [@Mars_Protocol](#).

8/11 Nebula lets you package assets into clusters, similar to ETFs. Buy a self-rebalancing crypto index, and use it as collateral, too.

Sigma lets you write options on any crypto asset. Also, provides options vaults, which generate organic yield.

9/11 Prism lets you separate the principal and yield components of yielding assets. Currently only perps, but maturities under development. Maturities create the yield curve for yielding assets, a first in crypto.

And a trio of money markets set to launch as well.

10/11 Once this DeFi suite is running, Terra 2 will be the only place in Cosmos for: options, indexes, maturities, and will have several different money markets to choose from.

Expect to see many synergistic integrations within the Terra 2 DeFi suite.

11/11 Now you know roughly what to expect from Terra 2 in the next 3 months.

Thread is informed speculation, not a guarantee. Watch protocol Twitter feeds for specific details.

Several projects skipped for brevity.

Comment about all the other awesome Terra 2 projects. (:
