@RadharamnDas

1st picture is taken from the NASA Web telescope of Carina Nebula (a region of Milky Way Galaxy). NASA called this picture as "Mystic Mountain" as it looks like a person is lying in mystic sleep

2nd pic is of Garbodakshayi Vishnu as described by Vedas: Vishnu in Yog Nidra...1/12 <https://t.co/IL3kvK6G2>

As per Vedas, there are 3 forms of Vishnu: Maha Vishnu, Garbodakshayi Vishnu & Ksirodakshayi Vishnu.

From Maha Vishnu's exhalation, unlimited number of Universes expands from His body pores & in each of these Universes

Krishna first expands himself as the Maha-Vishnu for the performance of creation. From his exhalation, unlimited universes expand from his pores. The Maha-Vishnu then expands himself and enters each individual universe as the Gabhodakasayi Vishnu.

When Maha Vishnu inhales, all these infinite Universes suck's back into His body pores & is destroyed. Again when He exhales the Universes are created & process continues. The time between Vishnu's ONE exhalation & inhalation is thousands of trillion's of years....3/12

Krishna first expands himself as the Maha-Vishnu for the performance of creation. From his exhalation, unlimited universes expand from his pores. The Maha-Vishnu then expands himself and enters each individual universe as the Gabhodakasayi Vishnu.

Maha Vishnu enters each of the Universes as Garbodakshayi Vishnu. In each Universe, there is 1 Bramha who is born from the lotus coming out from the navel of Garbodakshayi Vishnu. Bramha ji creates planetary systems & their size is different in different Universes...4/12

There are Bramha ji's with 4 heads, 8 heads, 16 heads...and so on. There are Bramha's with trillion's of heads too.

The size & complexity of each of the Universe depends on the number of head of Bramha ji of that Universe.

The Bramha ji of our Universe is four headed....5/12

THE AGE OF BRAHMA IS 311.04 TRILLION YEARS WHICH IS EQUIVALENT TO AGE OF UNIVERSE. THE DETAILED CALCULATIONS ARE AS FOLLOWS...6/12

[I] YUG

Following are four YUGAS as per VEDAS

1 SATYUG = 17,28,000 years (17 Lakh 28 Thousand)

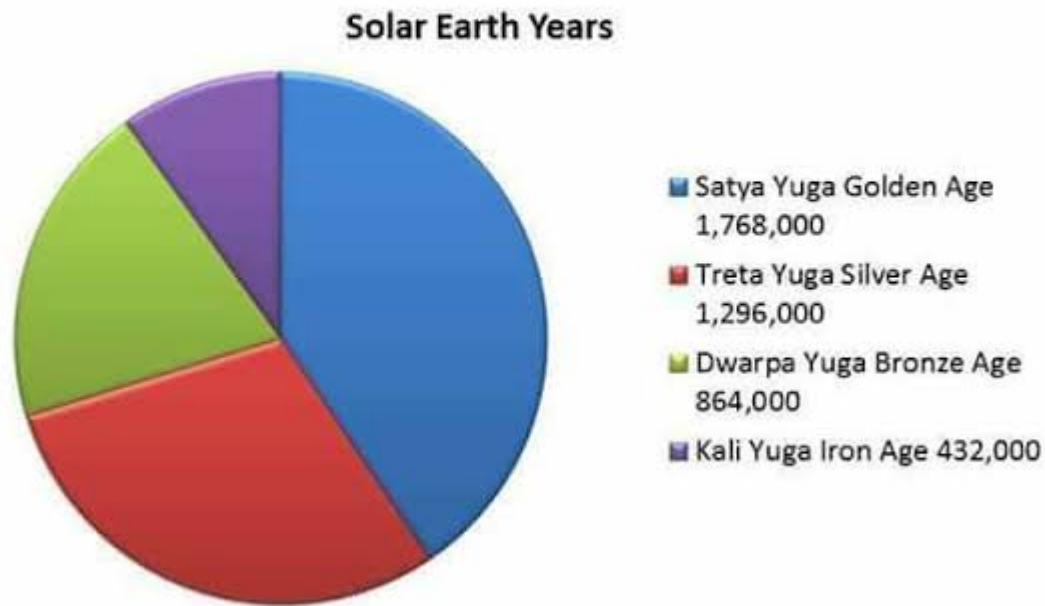

1 TRETA YUG = 12,96,000 years (12 Lakh 96 Thousand)

1 DWAAPAR YUG = 8,64,000 years (8 Lakh 64 Thousand)

1 KALIYUG = 4,32,000 years (4 Lakh 32 Thousand)

.....7/12

The Cycle of four Yugas=Maha Yuga or Catur Yuga

[2] MAHAAYUG

This is collection of 4 YUGAS. The total is 4,320,000 (4.32 million)

[3] MANVANTARAS/MANU

1 MANU = 71 MAHAAYUG = $71 \times 4,320,000$ Years = 306,720,000 Years (306.72 Million).....8/12

[4] KALPA

A Kalpa is made up of BRAHMA's 1 day which is equal to 1000 MAHAYUGAS .Universal dissolution happens after that during night of brahma, followed by creation of new universe

1 KALPA= 1 DAY OF BRAHMA= 1,000 MAHA YUG= $1,000 \times 4,320,000$ Years = 4,320,000,000 Years....9/12

1 day of Brahma Consists of 14 MANU's & There is a gap /Junction of 1,728,000 years in between every two manus

1 DAY OF BRAHMA= 14 MANU's + 15 Junction points= $14 \times 71 \times 4,320,000 \text{ years} + 15 \times 1,728,000 = 4,294,080,000 + 25,920,000 = 4,320,000,000 \text{ years (4.32 billion)} \dots 10/12$

1 FULL DAY OF BRAHMA = 2 KALPAS = Day + Night = $4,32,00,00,000 \times 2 = 8.64$ Billion years.

FULL AGE OF WHOLE UNIVERSE

Full Age Of whole Universe = 100 years of brahma with 360 days per year = $100 \times 360 \times 8,640,000,000 = 311,040,000,000,000$ years

311.04 trillion years....11/12
