The Complete #Trading #Process

1) Stock Selection - Buy Strongest, Sell Weakest. Combine Higher TimeFrame to Identify Strength/ Weakness

2) Entry SetUp - Enough FirePower for Sustainable Trend Going Forward (1/n)

3) Trend Confirmation - That Point from which chances of Reversal are Low so as to achieve Higher Win Rate

4) Low Risk Entry - Costs Saved in Execution are added back to profit. Use Mkt Fluctuations in Our Favour (2/n)

5) Initial SL- Uncle Point. Not Too Tight, Not Too Loose, Just About Perfect. Let the trade breath before leaping forward

6) Trailing SL - Reduce Open Risk in Trade Continuously Simultaneously allowing Trend to Develop (3/n)

7) Profit Booking - Don't Look for Top/ Bottom. Catch 70-80% of Max Profit. Most Difficult Decision. No Perfect Exit. Break in Multiple Exits. Be happy with Whatever We Get (n/n)
