When short term gets confusing, zoom out to long term charts. #Nifty

#CNXIT still must do a minimum 52K++ (to complete its move from Oct 2001 low) & therefore any dip between 26K-29K is a good buy zone. Also has mid-line support right there (previously resistance).

Personally have bought #Infy #Wipro #TechM this week - Will add these and other front line IT stocks in near term.
