JSON Interview Cheatsheet

We have been using and hearing a lot about JSON, but many of us don't really know what is JSON, below is a Thread about Json and Interview Questions!

■Thread

#100DaysOfCode #DEVCommunity

1) Mention what is JSON?

JSON is a simple data exchange format. JSON means JavaScript Object Notation; it is language and platform-independent.

#100DaysOfCode

2) Explain what is JSON objects?

An object can be defined as an unordered set of name/value pairs. An object in JSON starts with {left brace} and finish or ends with {right brace}. Every name is followed by: (colon) and the name/value pairs are parted by,.

#100DaysOfCode

3) Explain how to transform JSON text to a JavaScript object?

One of the common use of JSON is to collect JSON data from a web server as a file or HTTP request and convert the JSON data to JavaScript, and then it avails the data in a web page.

#100DaysOfCode

4) Mention what is the rule for JSON syntax rules? Give an example of a JSON object?

JSON syntax is a set of the JavaScript object notation syntax.

Data is in name/value pairs
Data is separated by comma
Curly brackets hold objects
Square bracket holds arrays
#100DaysOfCode
5) Why must one use JSON over XML?
It is faster and lighter than XML as on the wire data format
XML data is typeless while JSON objects are typed
JSON types: Number, Array, Boolean, String
XML data are all string
Aime data are all string
#100DaysOfCode
6)What is JSON-RPC & JSON Parser
JSON RPC: It is a simple remote procedure call protocol same as XML-RPC it uses the lightweight JSON format
JSON Parser: JSON parser is used to parse the JSON data into objects to use its value.
#100DaysOfCode
7) Mention what is the file extension of JSON?
T) Mondon what is the life extension of coort.
File extension of JSON is .json
•
#100DaysOfCode
8) Mention which function is used to convert a JSON text into an object?
To convert JSON text into an object "eval" function is used.
•
#100DaysOfCode
9) Mention what are the data types supported by JSON?
Data types supported by JSON includes
Number
String
Boolean
Array
Object

Null

#100DaysOfCode
10) Mention what is the role of JSON.stringify?
JSON.stringify() converts an object into a JSON text and saves that JSON text in a string.
#100DaysOfCode
11) Show how to parse JSON in JQuery?
To parse JSON in JQuery, we will see the example
var JSON = '{"name": "Guru 99", "Description ": "Learn PHP Interactively with PHP Beginner Tutorials}
obj = \$.parseJSON(json);
//alert(https://t.co/Y7zz0x7YXk);
#100DaysOfCode
12) Mention what is the function used for encoding JSON in PHP?
For encoding JSON in PHP, json_encode () function is used. This function returns the JSON representation of a value on success or false on failure.
#100DaysOfCode
13) Explain how you can convert a string into a JSON Array?
To convert a string into a JSON array, you need to create a JSONObject object for each of your objects, and add those to your JSON array.
#100DaysOfCode
14) Mention what are the JSON files?
JSON file type for JSON files is ".json" The MIME type for JSON text is "application/JSON"
#100DaysOfCode
15) List out the uses of JSON?
Uses of JSON includes

When writing an application based on JavaScript it uses JSON, which includes browser extension and websites JSON is used for transmitting and serializing structured data over a network connection
#100DaysOfCode
16) Mention what are the drawbacks of JSON?
Drawbacks of JSON are
It does not contain a type definition It lacks some sort of DTD
#100DaysOfCode
17) Mention what is JSONP?
JSONP stands for JSON with padding. It is a method used to bypass the cross-domain policies in web browsers. In other words, JSONP is the simple way to deal with browser restrictions when sending JSON responses from different domains from the client.
18) Mention what is the MIME type of JSON?
MIME type for JSON text is "application/json"
#100DaysOfCode
19)What is the difference bw JSON & JSONP
JSON is a simple data format used for communication medium between different systems
JSONP is a methodology for using that format with cross-domain ajax requests while not being affected by the same-origin policy issue
