GLUTEAL AMNESIA, also known as the "dead butt syndrome" simply means:

➡■ Your gluteal muscles have been "unused" for so long that they now fail to activate whenever your body needs them to

Role of the Glutes:

- ➡■ Play a major role in the way our body moves
- ➡■ Not just there for aesthetics
- ➡■ Crucial for keeping our torsos upright, moving/rotating of the thighs & walking/running

GLUTEAL AMNESIA ■■

➡■ Glutes get so weak that they forget to activate

➡■ Consequence: Other muscles need to compensate - such as your lower back muscles or hip flexors

➡■ This can cause all sorts of problems such as lower back pain, knee pain & poor posture

How do you know if you suffer from the "dead butt syndrome"?

➡■ Glute amnesia can vary in severity

Here's a simple test:

➡■ Do 10 glute bridges (video ■)

■ If you feel them more in your quads or hammies than in your glutes, you know you have some work to do.

What can you do about it?

1. Choosing the right exercises

1■ Get off your butt (pun totally intended) & start focusing on your glute training

2■ Exercises like the squat, the deadlift & hip thrust are on top of the list
