Today WhatsApp wished it's users good morning. Accept the updated terms and conditions or say goodbye. (Thread 1/n) It is effective from Feb 8, 2021.

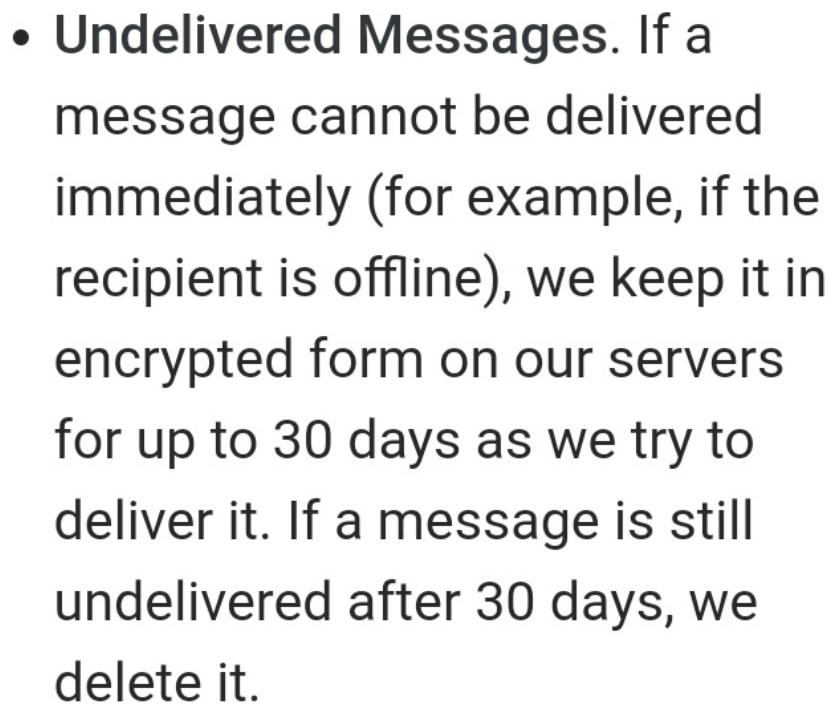

There are seperate hyperlinks for terms and privacy policies. Both these hyperlinks lead to multiple pages of contracts written in a very jargonised language. A few things I noted : https://t.co/8KMfjnJuQJ

The information 'we' provide to #WhatsApp include our messages. Also WhatsApp claims that it is end to end encrypted BUT,

Information You Provide

- **Your Account Information**. You must provide your mobile phone number and basic information (including a profile name of your choice) to create a WhatsApp account. If you don't provide us with this information, you will not be able to create an account to use our Services. You can add other information to your account, such as a profile picture and "about" information.
- **Your Messages**. We do not retain your messages in the ordinary course of providing our Services to you. Instead, your messages are stored on your device and not typically stored on our servers. Once your messages are delivered, they are deleted from our servers. The following scenarios describe circumstances where we may store your messages in the course of delivering them:

BUT if your friend / enemy / boyfriend / family or anyone is offline and your message sent to him cannot be delivered #immediately, it will be saved on #WhatsApp servers for 30 days.

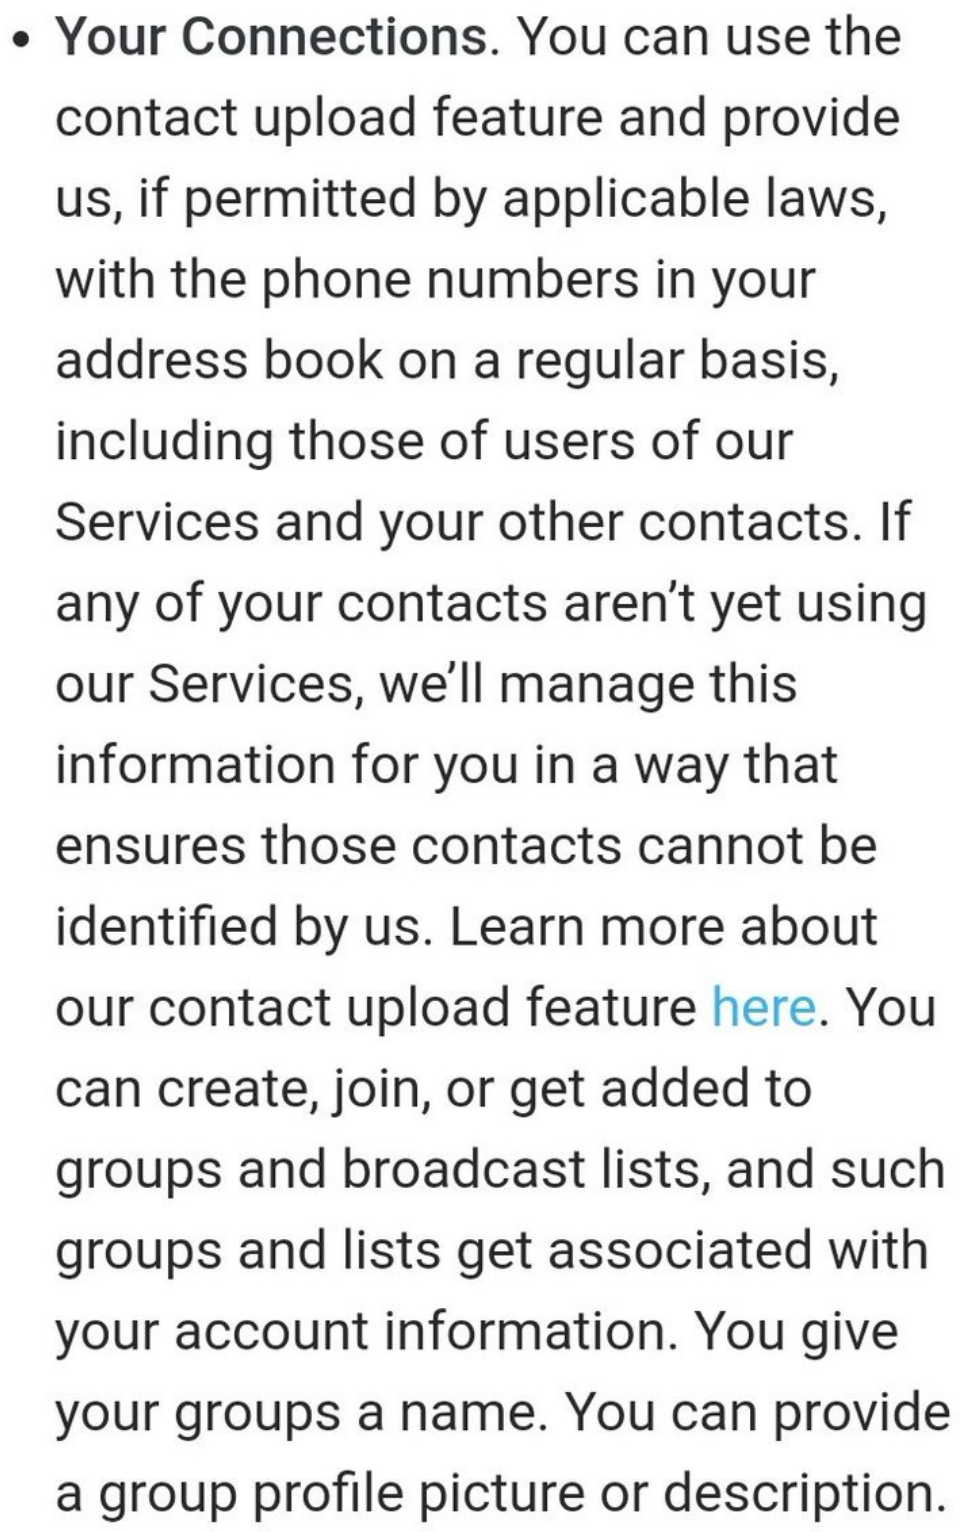

Also: When you forward media msg in #WhatsApp that media is stored temporarily in encrypted form on it's servers to aid in more efficient delivery of additional forwards. Tada! (Consider a thousand times before sending any images; news anchors can officially read your chats.)

circumstances where we may store your messages in the course of delivering them:

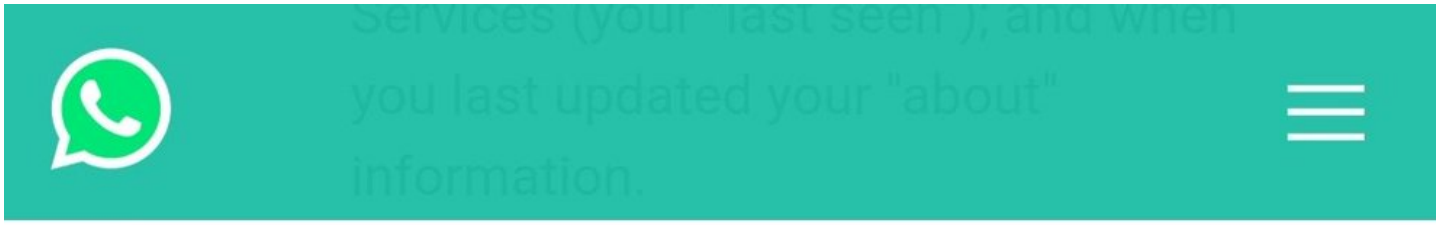

- **Undelivered Messages**. If a message cannot be delivered immediately (for example, if the recipient is offline), we keep it in encrypted form on our servers for up to 30 days as we try to deliver it. If a message is still undelivered after 30 days, we delete it.
- **Media Forwarding**. When a user forwards media within a message, we store that media temporarily in encrypted form on our servers to aid in more efficient delivery of additional forwards.

We offer end-to-end encryption for our Services. End-to-end encryption means that your messages are encrypted to protect against us and third parties from reading them. Learn more about end-to-end encryption and how businesses communicate with you on WhatsApp.

#WhatsApp can also read your contacts list. And incase someone who doesn't use WhatsApp is on that list, Whatsapp will manage the contact information "in a way that ensures those contacts cannot be identified by it."

WhatsApp also collect your device's hardware model, operating system information, battery level, signal strength, app version, browser information, mobile network, connection information, including phone number, mobile operator details. Remember Jio and Facebook deal?

- **Device And Connection Information**. We collect device and connection-specific information when you install, access, or use our Services. This includes information such as hardware model, operating system information, battery level, signal strength, app version, browser information, mobile network, connection information (including phone number, mobile operator or ISP), language and time zone, IP address, device operations information, and identifiers (including identifiers unique to Facebook Company Products associated with the same device or account).

Even if you don't give #WhatsApp permission to use your location, they use IP addresses and other information like phone number area codes to estimate your general location. (Tip : People in love, planning to elope, do that once you delete your WhatsApp.)

- **Location Information**. We collect and use precise location information from your device with your permission when you choose to use location-related features, like when you decide to share your location with your contacts or view locations nearby or locations others have shared with you. There are certain settings relating to location-related information which you can find in your device settings or the in-app settings, such as location sharing. Even if you do not use our location-related features, we use IP addresses and other information like phone number area codes to estimate your general location (e.g., city and country). We also use your location information for diagnostics and troubleshooting purposes.

#WhatsApp can share your information with third party apps but on terms and conditions decided by it. I just wish users had a say?

- **Third-Party Service Providers**. We work with third-party service providers and other Facebook Companies to help us operate, provide, improve, understand, customize, support, and market our Services. We work with these companies to support our Services, such as to provide technical infrastructure, delivery and other systems; market our Services; conduct surveys and research for us; protect the safety, security and integrity of users and others; and assist with customer service. When we share information with third-party service providers and other Facebook Companies in this capacity, we require them to use your information on our behalf in accordance with our instructions and terms.

#WhatsApp is not the only service you can use. There is signal, telegram and other channels which are less jargonised when it comes to terms and conditions.
Let us at least have a choice. No good ever came from monopoly.
