CAPITAL ALLOCATION

Capex over Next 3 Years

Source: Company, MNCI Research

INR in Crs

New round of Capex most likely to be covered by operating cashflows

- We strongly believe that the operating cashflows are likely to be higher than the capex requirements and thus there shouldn't be any additions to the current debt levels
- Further, we expect company to have >2x Asset turnovers in the new capex which should yield >20% EBITDA margins as the capex is directed towards value-added segments
- With this, company can potentially add INR ~360crs of EBITDA on account of these projects
- This is over an above INR ~620crs spent FY19 onwards which is yet to hit critical mass.
