This article talks about how Pfizer rolled out / cut / reordered / allocated theri vaccines.

1+

Israel is paying $30 per dose.

or about Rs 2100 per dose. or Rs 4200 for 2 doses. And NO guarantee when we will get coz if someone offers $31 per dose then pooh they take precedence.

2+

and rake in more moolah!!! just about $15 billion from JUST THIS VACCINE.

3+

epitome of capitalism, which some want in India as well.. in other words, THOSE WHO CAN PAY get vaccines, and the poor masses... eh.. who cares about them.

4+

yay!!!! screw the people.. make money..

5+

tsk tsk a minor point for roll out in india given entire country is at that temp all thru the year.

6+

another data point about Oman and how US needs >> UK for now.. if someone pays more then it goes there..

7+

while the great companies were looking at making the maximum profit, here was India giving doses across the world for practually no cost.

8+

Here is the developed world, EU, saying NOT to negotiate bilateral deals with drug companies, and we have Metasized Idiots like @ShekharGupta saying Indian states should be allowed to do that.

Says enough of that idiot's IQ or lack of it.
9+

exact same thign which many Indian RW have been advocating...

10+

normal behaviour and should be encouraged only.

11+

SII giving it for no profit is probably why a certain superpower blocked access to raw materials. Who knows?

key point -- "couldnt deliver on time" but minor for our geniuses.
