Amazing session by @itsTarH ■

I've taken these notes from this session.

Sharing for the benefit of the Investors Community!!■

Can't thank enough @dadalife369 @cautkarshpandey @saketreddy for giving us an opportunity to interact with highly skilled professionals

Tartt Session Clubhouse

How do you combine both Technical & Fundamentals?

Technical used to just assess the Support & Resistance / overbought & oversold.

If other catalysts don't take a part then price acts in a similar way near Support & Resistance.

Use fundamentals to be comfy with valuation.

Use technicals to time your entry at a better price.

How do you decide your ENTRY / EXIT?

Exit is only in case of better opportunities or if fundam change.

He has a long Term horizon generally.

Before taking an Entry, do assess your Risk & Monitor it.

He personally sets a Portfolio target return & only buy companies that you understand & can track them well.

One more reason he can take an exit is if they fail to deliver or if the story doesn't sell out as its expected. He doesn't diversify too much. Allocate atleast 7% of your portfolio to a company.

It's beneficial for the Communist party there.
There are very good companies.

Eg - Alibaba's business is as big as Amazon.

For India, China + 1 is a great theme.

Chemicals - earlier we used to import few chemicals from China & now our home companies are manufacturing them.

Renewable Energy space -

lot of forces combined together to provide Tailwinds

World is reducing its carbon footprint & use of fossil fuels.

New within Renewables entire power capacity

Solar is highest, leading to cost reduction

→ Silicon Ingots - we import from China.

→ Solar modules manufacturing setup in India
Solar sector demand ↑.

I recently read about Biden's plan to run

50% power from Solar Panels by 2030.

He was comfortable investing in fossil Renewables.

Tools you use for finding stocks ?

Go through any screeners, then hear concalls, spend sometime with annual reports, investor presentation etc.

Everything is available for free.

Use data coming from the company itself.

If you find better opportunities, how often you churn your stock / what % of Portfolio ?

Churning is not there.

If fundamentals are upholding good, then should hold your existing winners.

Acrifail Rejecting reason - wasn't able to figure out about Management.

Always research based on trends. Looking at the unlisted space too !

Analyse how would an industry look like 10 years down the line and then find specific companies that have competitive advantage.

No. of companies in your Portfolio ?

Maximum - 15 Stocks.

How much % of Portfolio has changed ?

max 20-30 %
